Currency Recycler

RZ-100 series

Superior Styling and Performance in Cash-in/Cash-out Automation. Recycling System Increases Efficiency.

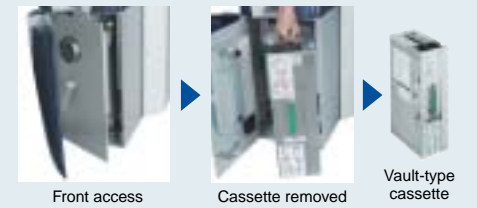

With many of today's financial institutions employing a kiosk-style, open floor plan, demand is growing for teller machines that offer attractive design, versatile functions, and advanced security. Introducing the RZ-100 series of Currency Recyclers, from GLORY. This all-in-one, automated cash-in/cash-out system features a compact design to fit easily under the teller counter, an easy user interface, automatic transaction processing, and a high level of vault security. The smartly styled RZ-100 not only lightens the load on tellers and increases their productivity, it also pleases customers by reducing their wait time in a queue.

Removable Cassettes

Large, 2,000-note capacity.

- Banknotes stored inside removable cassettes can easily be collected in bulk. This reduces manual cash handling and speeds up and simplifies the collection process.

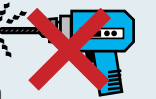

High-Level Security

Provides safe overnight storage, too.

- The RZ-100 vault is 6-mm thick.
- A number of advanced security devices are available as options.
- The options provide flexibility; security can be strengthened as required by the conditions and location of a particular branch.

Security-Enhancing Options

- UL291 safe 8H/24H
- CEN III
- Delay Timer
- Seismic Sensor
- Alarm Sensor
- Password Lock System

Easy Maintenance

Daily maintenance is quick and easy.

Upper unit

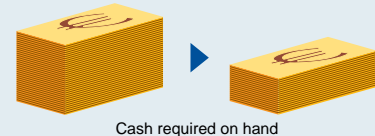

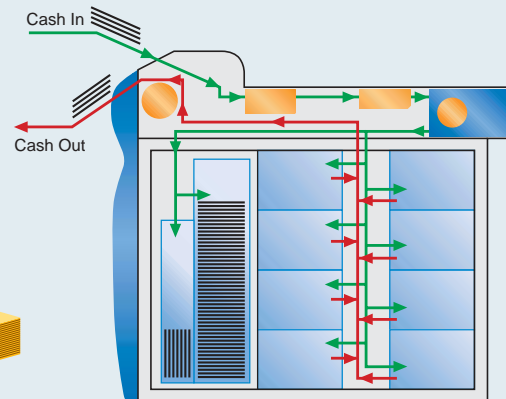

Lower unit

Recycling System

Reduces the amount of cash required on hand.

- Increases efficiency by allowing the use of deposited banknotes for withdrawals. Also minimizes jams by recycling only notes that are in good condition.
- Banknotes available for withdrawal payouts are replenished each time a customer makes a deposit, so the teller needs less cash on hand.
- Cash on hand can be quickly checked, speeding up the closing process at day's end.

Cash required on hand

Space-Saving Solutions

Two tellers per one RZ-100

- The RZ-100's smart design makes it possible to insert and remove notes from either right or left side, for smoother, more comfortable transaction processing.
- An "occupation" (in-use) button and lamp on each side of the RZ-100 help prevent a teller from taking the wrong notes during two-teller operation.

Recycling System

Side Pockets

Convenient storage for cheques and unrecognizable banknotes

- A pocket on each side of the RZ-100 is provided for storing cheques and unrecognisable banknotes. This stores the item in appropriate teller's cassette for smoother management and collection.

Accurate Authentication

Also accommodates optional SNRS (serial number recognition sensor).

- The RZ-100 is equipped with an advanced system that provides extremely accurate recognition and authentication of banknotes. The system also sorts out unfit notes.
- Also available is an optional SNRS (serial number recognition sensor) that can scan serial numbers to detect counterfeit banknotes. This provides even stronger counterfeit detection.

Escrow Function

Temporarily stores up to 150 notes.

- Rather than sending counted banknotes immediately to a stacker, the RZ-100 Escrow function holds them until the transaction is concluded.
- If the customer cancels the transaction or a recount is required, the original notes are returned to the teller.
