

# CRESUS

## Management of central tills in stores

Cresus is a management software for central tills in stores that works in multi-currency environments (local currency, Euro and other currencies). It is mainly intended for big and medium sized businesses.

### Manage your package flow

Cresus handles the physical flow and processing of cash book-keeping and processed values in the cash centre. It integrates all the packages' activities and states, preparation and delivery of cash funds, bank payments and withdrawals, ATM replenishment, control of receipts and vault control.

### Processing automation

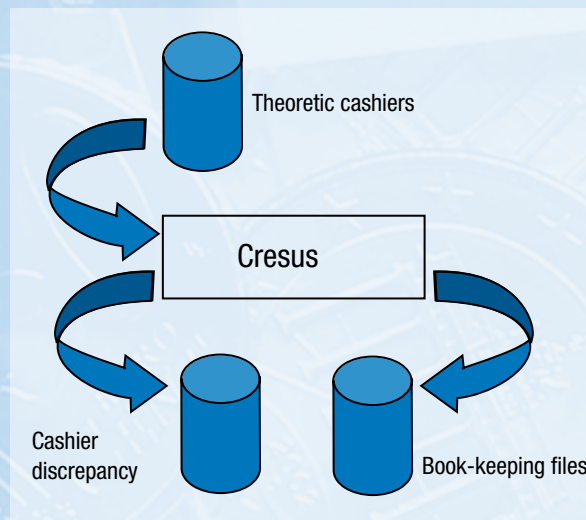

The possibility to connect several cash processing machines (note and coin counters and sorters), as well as the complementary input of values allows for a completely automated work station.

### Follow up on book-keeping in your cash centre

Cresus has numerous functions that can help you with your book-keeping at the cash centre.

- Follow up on cashier discrepancy thanks to the integration of the »theoretic cashier« coming from the stores' point of sales system.
- Handling of cashier discrepancy with a tool to search for errors.
- The book-keeping is done with a pivot currency: local currency, Euro or other currency.
- Production of files and documents for the stores' book-keeping.
- Production of statistics regarding completed transactions.

### Connections to other software

Cresus is, apart from this, capable of retrieving information related to »theoretic cashier« issues from the main till coming from the main cashier management systems in retail.

Cresus can extract a file with cashier discrepancy. Specific interfaces may be developed to the stores' own systems.

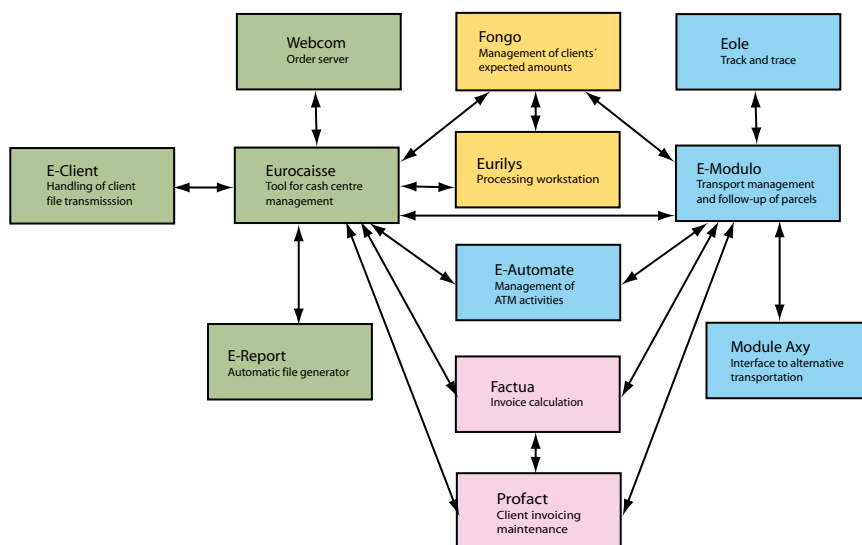

### Technical environment

Cresus works with Windows. The configuration can be set up either in single workstation mode or in multi workstation environment depending on the size of the centre and the number of operators. The connection drivers of the counting machines are delivered together with Cresus.

Founded in 1966, SCAN COIN is one of today's leading suppliers of cash processing equipment, system solutions and services. Our worldwide customer base is served through a network of SCAN COIN companies and distribution partners covering some 120 countries.

SCAN COIN develops, manufactures and markets equipment and integrated solutions for handling banknotes and coins, and has become a world leader in the automatic cash processing market.

Created in 1986, MLSA Groupe SCAN COIN has great experience in development of software for cash handling. MLSA offers a range of solutions that keeps complete track of your money, from picking up at the clients' until invoicing, and has personalised solutions for all professional actors in cash handling within three segments: CIT/cash centers, banking and retail. With more than 55% of the market, MLSA Groupe SCAN COIN is the uncontested number 1 in France in this business. MLSA is also present in several European countries and on the African continent. The team offers services within general advising, engineering and development, installation, training and product support.

A range of solutions for a complete traceability
