

WinORD

WinORD is a software solution for order and depot handling. This Windows-based program is designed to cover the Cash Out processes. The cash out processes implies handling customer orders, handle cash storage, pick money from depots or vaults, pack the money according to the customers' wish and invoice accordingly. Administration, control and planning is also taken care of by these modules. A number of maintenance modules are available for customers, cashiers, items, depots and routes. A history module allows you to search for orders on criteria as value, delivery date interval and customer.

The installation is easy-to-use and reliable and is intended for medium-sized cash centres (approximately 1-20 workstations).

Modular design

The system is built around independent modules, which can be added or removed to best suit the customers' organisations and method of working.

Master/Slave setup

Master: For administration, placing orders, booking and invoicing. Slave: Placing orders and packing of notes/coins

Interfaces

WinORD is interfaced to other software systems, such as banks' clearing systems.
